Replace line 50 on page 2 with the following:

(1) BIOLOGICAL DATA. Data generated by the

Replace lines 53 through 55 on page 2 with the following:

or neural properties, compositions, or activities, or an individual's body or bodily functions, which are used to uniquely identify the specific individual to whom the data pertains. The term does not include a photograph, video or audio recording, or data generated from a photograph or audio recording, unless such data is generated to uniquely identify the specific individual to whom the data pertains.

Replace lines 76 through 78 on page 3 with the following:

measurement of the activity of an individual's central nervous system and that can be processed by or with the assistance of a device.

(6) THIRD PARTY. An individual or legal entity that is not a consumer, covered entity, or processor. For the purposes of this subdivision, a processor is an entity

25           that: (i) processes biological data or neural data on  
26           behalf of a covered entity; (ii) adheres to the  
27           instructions of the covered entity; and (iii) assists the  
28           covered entity in meeting its obligations under this act.

29  
30           Replace line 121 on page 5 with the following:

31                     following transfers, disclosures, or uses of  
32           biological data or neural data:

33  
34           Replace line 143 on page 6 with the following:

35                     administration.

36                     (9) To provide a product or service specifically  
37           requested by a consumer; to perform a contract to which  
38           the consumer is a party, including fulfilling the terms  
39           of a written warranty; or to take steps at the request of  
40           the consumer prior to entering into a contract.

41                     (10) To prevent, detect, protect against, or respond  
42           to security incidents, identity theft, fraud, harassment,  
43           malicious or deceptive activities, or any illegal  
44           activity; to preserve the integrity or security of  
45           systems; or to investigate, report, or prosecute those  
46           responsible for any such action.

47                     (11) To conduct internal research to develop,  
48           improve, or repair products, services, or technology.

49                   (12) To effectuate a product recall.

50                   (13) To identify and repair technical errors that  
51                   impair existing or intended functionality.

52                   (14) To perform internal operations that are  
53                   reasonably aligned with the expectations of the consumer  
54                   or reasonably anticipated based on the consumer's  
55                   existing relationship with the covered entity or are  
56                   otherwise compatible with processing data in furtherance  
57                   of the provision of a product or service specifically  
58                   requested by a consumer or the performance of a contract  
59                   to which the consumer is a party.
